### SITE PREPARATION CONCRETE.

1. Concrete should be laid a minimum of 75mm thick and at least 100mm greater than the overall size of the metal base frame at approx. 25mm above ground level. A sheet of heavy duty polythene placed under the base area will help prevent dampness rising from the ground into the shed. For concrete base measurements see fig. 2.

### PRÉPARATION DE LA DALLE:

1. Le béton doit être coulé sur une épaisseur de 75mm, et dépasser de 100mm la hauteur du profilé de base soit 25mm au dessus du niveau du sol. L'utilisation d'une toile de polythène épaisse et résistante, placée sous la base aidera à empêcher l'humidité de monter du sol dans l'abri.
